In today's world, embedded systems are everywhere -- homes, offices, cars, factories, hospitals, plans and consumer electronics. Their huge numbers and new complexity call for a new design approach, one that emphasizes high-level tools and hardware/software tradeoffs, rather than low-level assembly-language

programming and logic design. This book presents the traditionally distinct fields of software and hardware design in a new unified approach. Embedded System Design: A Unified Hardware/Software ... Design Metrics of Embedded Systems A Design Metric is a measurable feature of the system's performance, cost, time for implementation and safety etc. Most of these are conflicting requirements i.e. optimizing one shall not optimize the other: e.g. a cheaper processor may have a lousy performance as far as speed and throughput is concerned.
