Once each group is assigned problems, I ask one group member to come up to the front of the room to put their answers on the blank copy master copy for their class. Tenth grade Lesson Using the Wave Equation to Solve Problems The wave equation is a very important formula that is often used to help us describe waves in more detail. $[v = f \times \lambda]$ Where Wave speed... The wave equation - Wave parameters and behaviours ... The equation of a transverse wave traveling along a very long string is $y = 6.0 \sin(0.020\pi x + 4.0\pi t)$ where x and y are expressed in centimeters and t in seconds. Determine: (a) the amplitude, (b) the wavelength, (c) the frequency, (d) The speed, (e) the direction of propagation of the wave, (f) the maximum transverse speed of a particle in the string, Lecture 11 Chapter 16 Waves I - University of Virginia All solutions to the wave equation are superpositions of "left-traveling" and "right-traveling" waves, $f(x + vt)$ and $g(x - vt)$. These are called left-traveling and right-traveling because while the overall shape of the wave remains constant, the wave translates to the left or right in time.  of light in a medium having an index n , and c represents the speed of light in
 vacuum. Sample Problem 1: The speed of light in an unknown medium is

 we have observed in the previous discussion, the solutions of the wave equation
 (1.2) are • given by the formula (2.1), • uniquely determined by u and $\partial_t u$ at the
 initial time $t=0$. Consequently, in terms of the functions v , w introduced in (2.1),
 $u(0,x) = u_0(x) = v(x) + w(x)$, $\partial_t u(0,x) = v'(x) - w'(x)$. Wave equations, examples and qualitative

What is the wave number in physics? - Answers The wave equation is a partial differential equation. We discuss some of the tactics for solving such equations on the site Differential Equations. One of the most popular techniques, however, is this: choose a likely function, test to see if it is a solution and, if necessary, modify it. So, let's use what we already know. The wave equation and wave speed - Physclips waves and sound So recapping, this is the wave equation that describes the height of the wave for any position x and time T . You would use the negative sign if the wave is moving to the right and the positive sign if the wave was moving to the left.
